Where Are The Bees? The New York Times

What is happening to the bees? This Tbook, featuring articles from The New York Times archives, chronicles how America's beekeepers have been struggling over the last decade with a mysterious ailment called colony collapse disorder (C.C.D.), which has killed tens of millions of honeybees. This is an alarming problem since bees are the pollinators of a substantial portion of our food supply. In fact, the U.S. Department of Agriculture estimates that nearly one-third of everything we eat depends on bee pollination. Scientists have not yet reached a conclusion about the cause of C.C.D., but there is growing evidence that a powerful new class of pesticides known as neonicotinoids, which are absorbed into plants themselves, may be important factors. And pesticides aren't the only culprits. Climate change, viruses, fungi and other pathogens have also been blamed.
