Laboratory Exercises in Human Physiology: A Clinical and Experimental Approach with Ph.I.L.S. 3.0 CD William Lutterschmidt, Deborah Lutterschmidt

This stand-alone laboratory text has been developed as an introduction to fundamental concepts in physiology. The text has been designed to emphasize an experimental approach to teaching physiology and is therefore designed for a particular type of student and curriculum. Many of the exercises will help students develop their clinical knowledge of physiology, plus help them gain an appreciation for the clinical techniques as would be needed by students studying nursing, physical therapy, and other health-oriented fields. Although this laboratory text may be used independently, its presentation and format of material will closely follow that of Vander's Human Physiology, 11th Edition.
